🧞 GIFT GENIE: OFFICIAL OWNER'S MANUAL

Version 1.0 | Prepared for New Owner

🏆 WELCOME, CEO.

Congratulations on acquiring **Gift Genie**. You now own a sophisticated, AI-powered Programmatic SEO engine.

This document is your roadmap. It covers **Technical Operations** (how to run the site) and **Growth Strategy** (how to make money).

PART 1: THE BUSINESS STRATEGY (SOPs)

1. The "Zero-Touch" Traffic Engine

You cannot write 1,000 blog posts manually. The AI must do it for you.

Strategy A: Programmatic SEO

- **Concept:** Every time a user searches for something new, the app builds a permanent landing page.
- **Action:** Seed the database by searching for high-volume keywords yourself (e.g., "Gifts for 30yo Nurse", "Gifts for Gamer Boyfriend").
- **Result:** These pages get indexed by Google automatically.

Strategy B: Pinterest Automation

- **Why:** Pinterest is a visual search engine for shoppers.
- **The Routine:**
  1. Search a phrase on your site (e.g., "Gifts for Mom").
  2. Take a screenshot of the result.
  3. Post it to Pinterest with the caption: "Top 3 Gifts for Mom (AI Generated)."
  4. Link back to your specific result page.
  5. **Goal:** 5 pins per day.

2. The Revenue Stack

Your income comes from three layers. If one breaks, the others sustain you.

- **Layer 1 (Volume): Amazon Associates.** The app links to search results to ensure items are always in stock.
- **Layer 2 (Profit): ClickBank.** The "Life Improver" card targets digital courses (50-75% commission).

- **Layer 3 (Passive): Display Ads.** Hard-coded slots for AdSense are located in the Footer, Header, and In-Feed.

⚙️ PART 2: TECHNICAL OPERATIONS

1. How to Transfer the Code

1. **Unzip** the source code folder.
2. **Upload** it to your own GitHub account.
3. **Connect** GitHub to Vercel.com (Free Hosting).

2. Setting Up The "Brain" (Environment Variables)

To make the app work, you need to add these keys in your Vercel Settings -> Environment Variables:

- **OPENAI_API_KEY**: Your key from platform.openai.com.
- **NEXT_PUBLIC_SUPABASE_URL**: Your Project URL from Supabase.com.
- **NEXT_PUBLIC_SUPABASE_ANON_KEY**: Your Public Key from Supabase.com.

3. How to Database Setup

1. Create a new project on **Supabase.com**.
2. Go to the **SQL Editor**.
3. Paste and Run this command to build the memory:

```
create table search_results (
  id bigint generated by default as identity primary key,
  query text not null,
  slug text not null unique,
  results jsonb not null,
  created_at timestamp with time zone default timezone('utc'::text, now()) not null
);
create index idx_slug on search_results(slug);
```

4. How to Change Affiliate Links (The Money Config)

You do NOT need to be a coder to change your affiliate tags.

1. Open the file: lib/monetization.config.ts
2. Look for tag: 'giftgenie-20' -> Change to **YOUR Amazon Tag**.
3. Look for client: 'ca-pub-XXX' -> Change to **YOUR AdSense ID**.
4. Save and Commit. The site updates automatically.

📞 SUPPORT

For the first 30 days, I am available via email to assist with the transfer and setup.

Good luck scaling your new empire.
